

Digital Fluid Temperature Sensor

Monitor temperature in extreme environments such as freezers, refrigerators, aquariums & more.

TMP-DFT-SEN

We've got facilities covered.

The Digital Fluid Temperature Sensor is designed to monitor locations such as refrigerators, freezers, or other locations where items are stored in extreme temperatures. This Propylene Glycol-filled sensor provides consistent temperature readings without random fluctuations or alerts that could be caused by repeated cold storage door openings or closings over the course of normal use.
